

Things to put on your display board

1. **TITLE** - Make it "catchy" and "original".
2. **QUESTION** - A title can also be your "Question".
3. **INTRODUCTION** - Tell all important background information such as, how you decided to do the project (saying that it was assigned doesn't count!), who helped you, what special research you had to do.
4. **HYPOTHESIS** - This is an educated guess as to the possible solution to your question. Tell why you think your experiment will turn out this way.
5. **MATERIALS** - List all the materials you used. You might also list all the reading resources you used on a second list.
6. **PROCEDURE** - Explain in detail what steps you took to do your experiment. Be sure you have a **CONTROL** in your experiment (a **CONTROL** is a comparison to prove your results - a way of proving that your results are accurate). Example: if you are trying to prove that Crest is the best toothpaste, you have to test Crest and several other brands over a period of time to see if it is the best.
7. **RESULTS** - Show charts, photos and graphs of your results.
8. **CONCLUSION** - Be sure you answer the question you asked to start with. Use as much detail as necessary. Also explain everything that went wrong and how you might change the experiment if you were to do it again.
